

# CBMP Sea Ice Biota

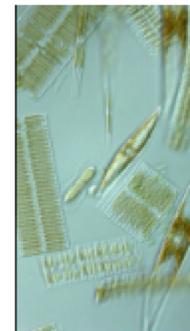

(monitoring?)

---

Where?

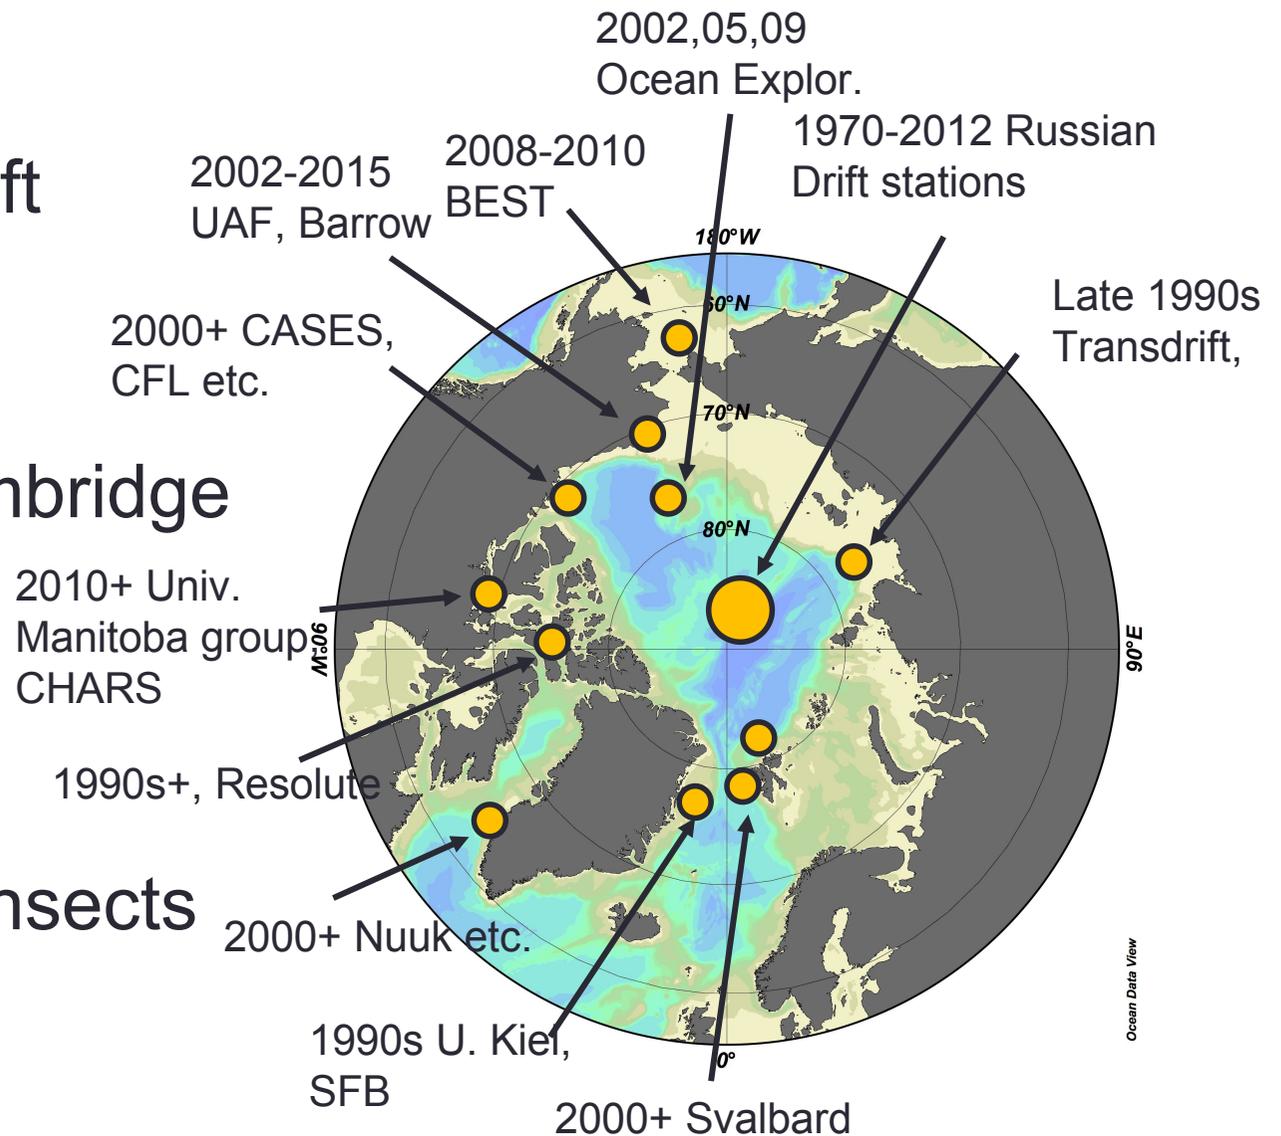

Who?

What?

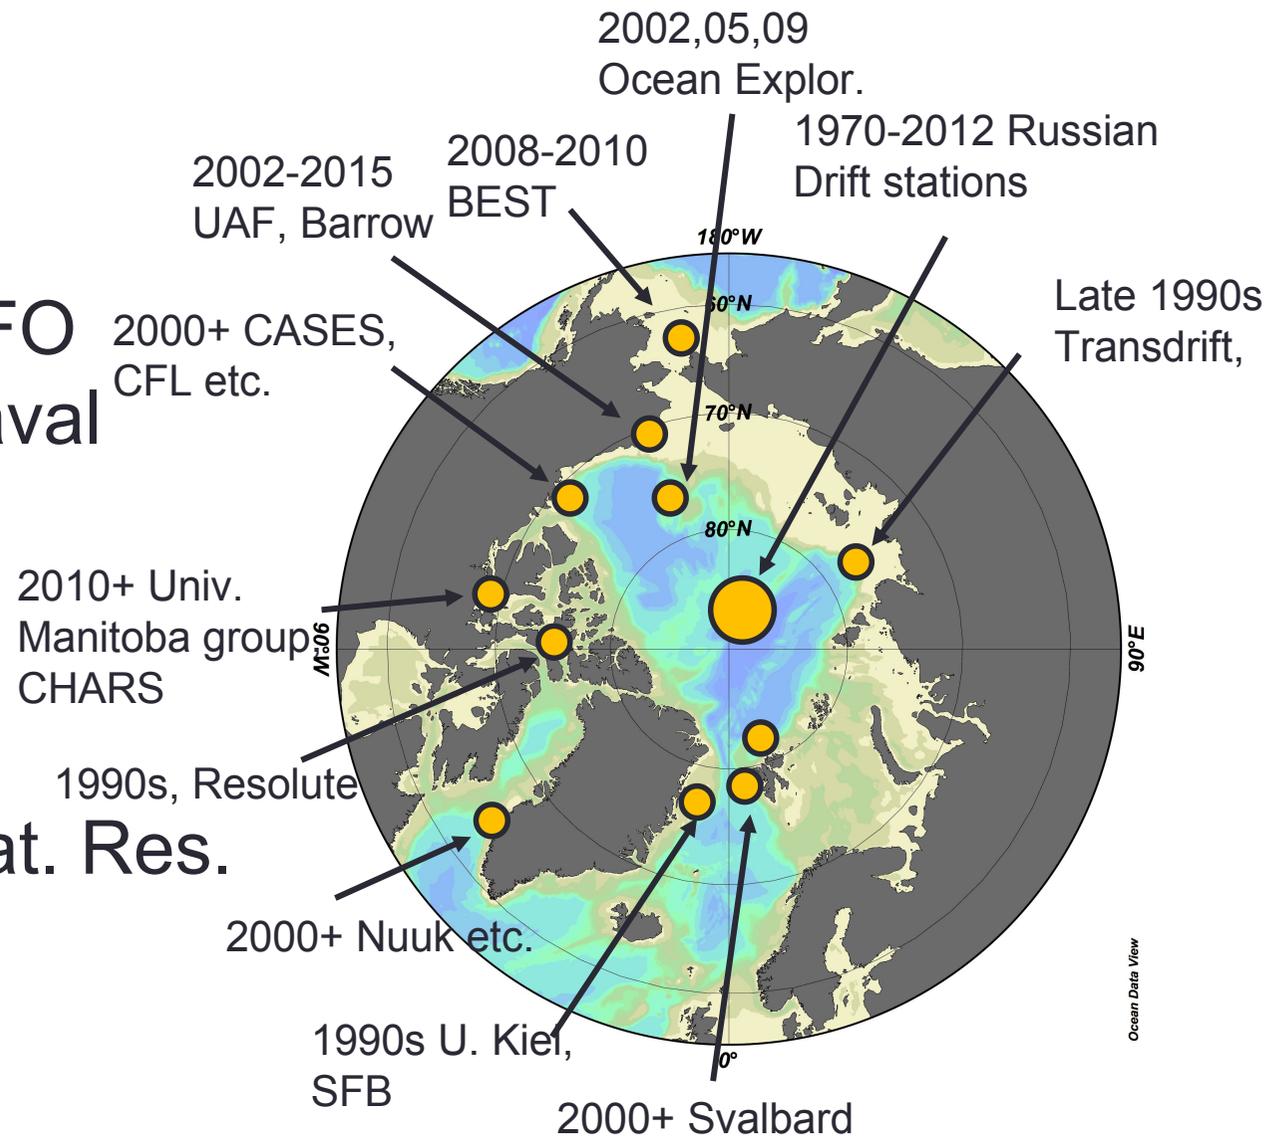

# Where?

- Russian ice drift stations
- Svalbard
- Resolute / Cambridge Bay
- Greenland
- Barrow
- Ship-board transects

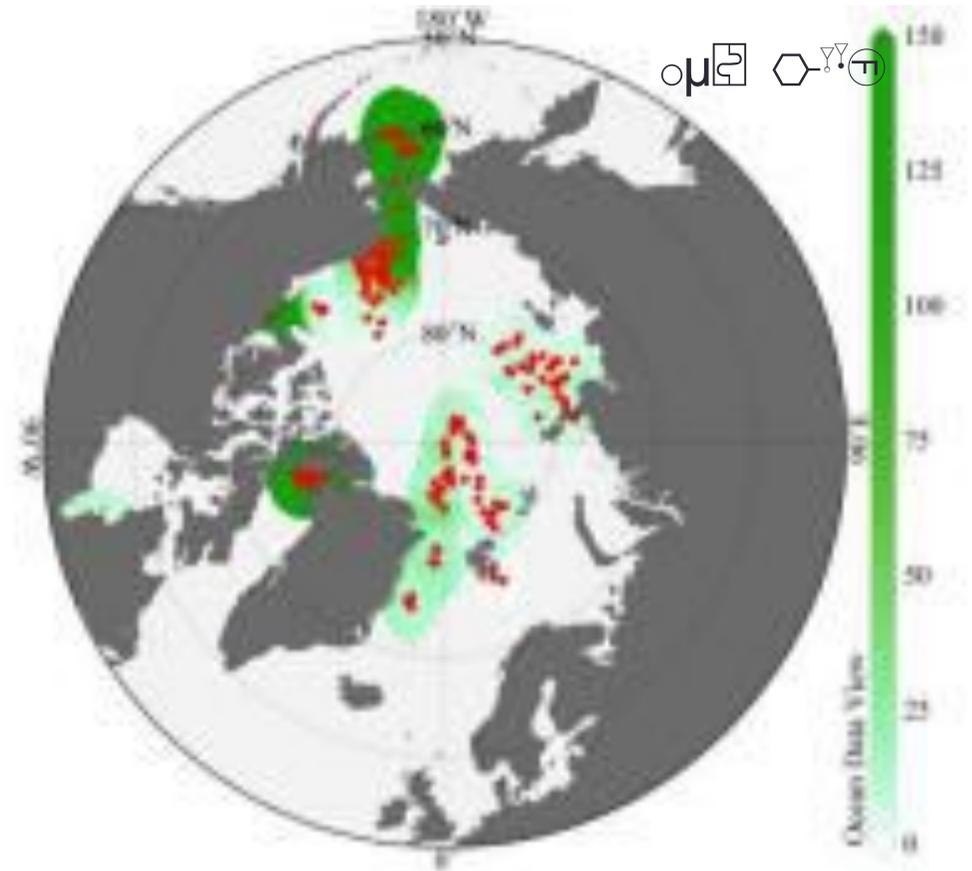

# Who?

- Shirshov
- U Manitoba, DFO  
Winnipeg, U Laval
- UNIS, NPI
- AWI, IPOE
- UAF, UW etc.
- Greenl. Inst. Nat. Res.
- ...

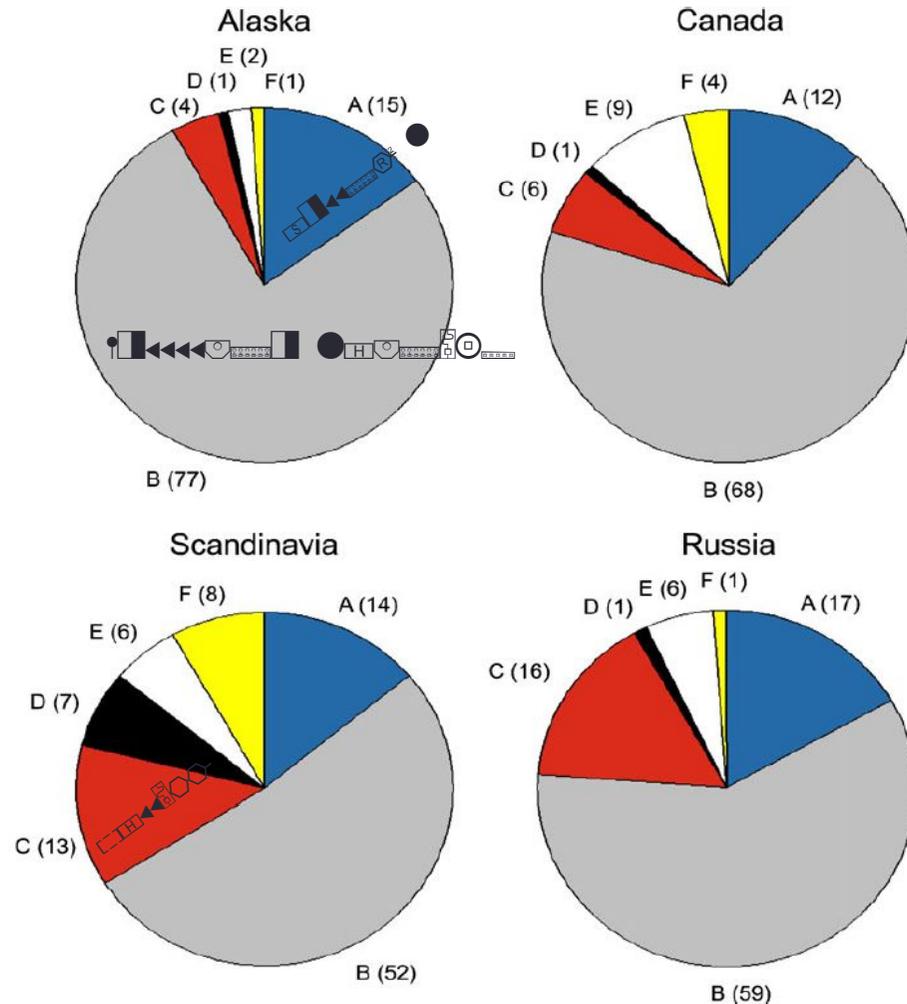

# What?

- Inventories
- Primary production
- Time series
- Role in food web
- Single species focus
  - *Boreogadus saida*
  - Ivory gull
  - Marine mammals
  - (other CBMP groups)

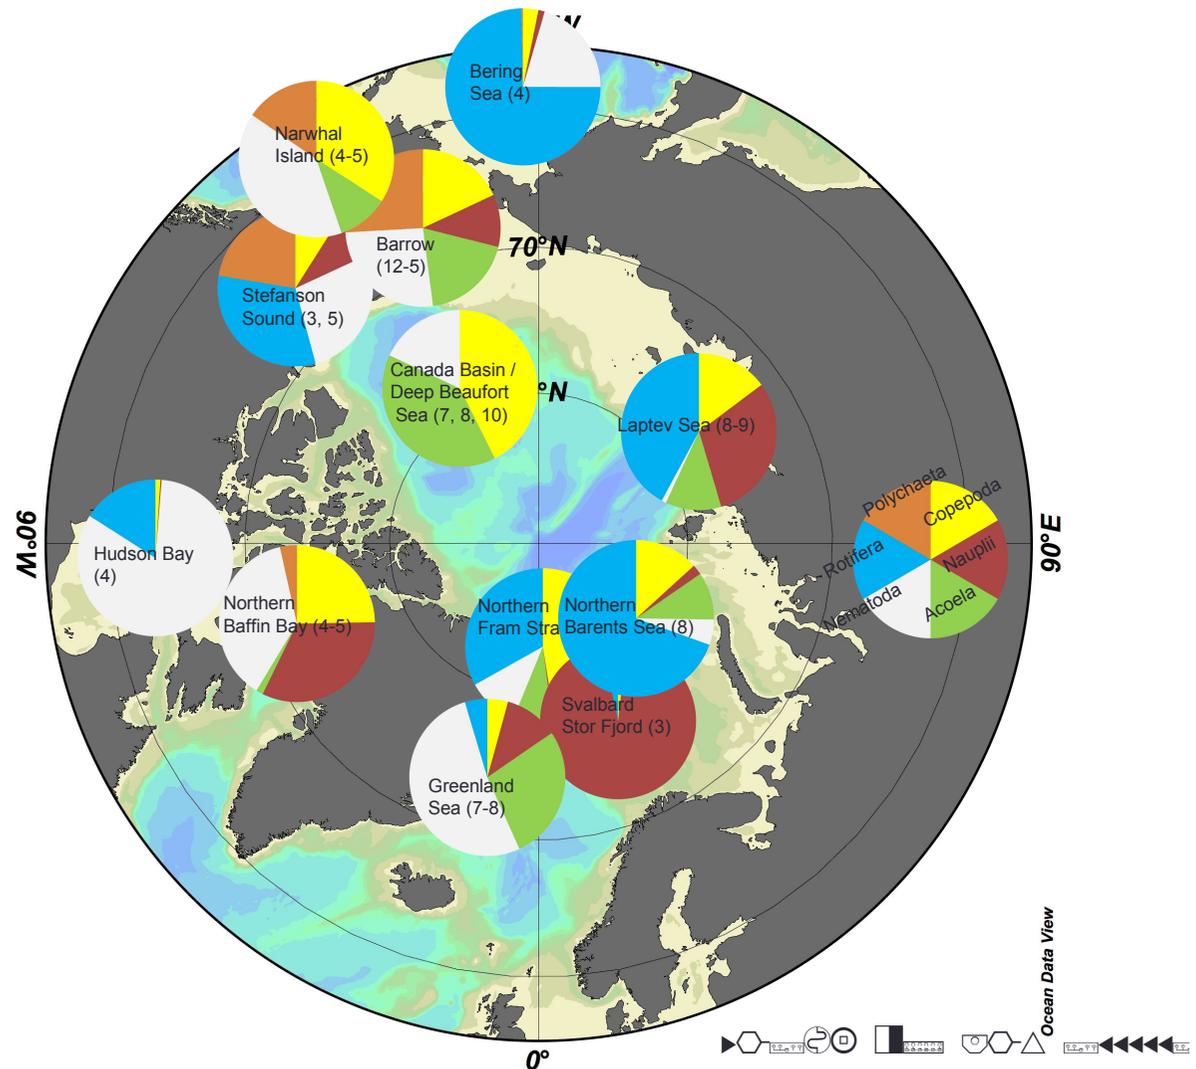

# Inventories: Protozoans, Ice algae

- >1,000 ice algae
- Cells >20  $\mu\text{m}$  best represented

# Inventories: Meiofauna (coarse)

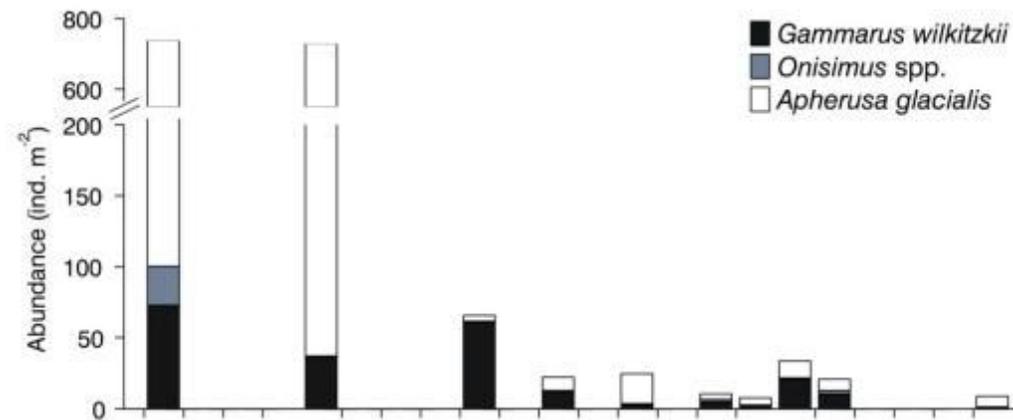

- ~20  $\mu\text{m}$  – 1 mm
- Dominated by nematodes, acoel flatworms, rotifers, nauplii, benthic larvae

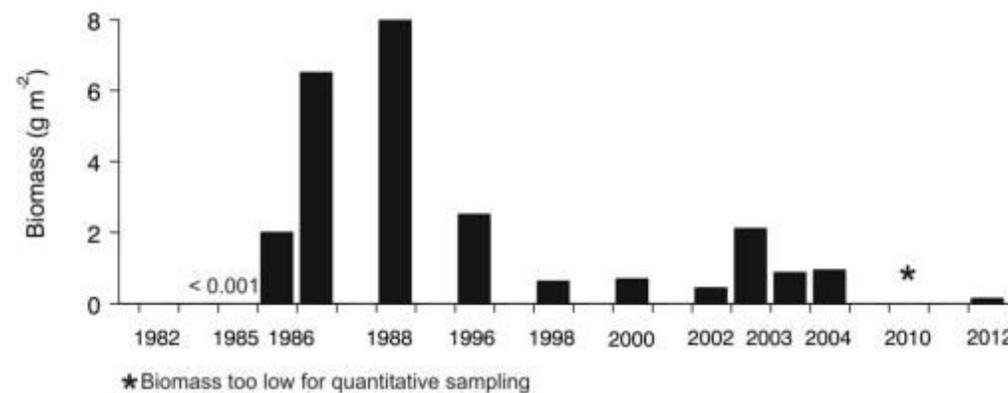

# Time series

Macrofauna trends around Svalbard (July-September, 1982-2012)

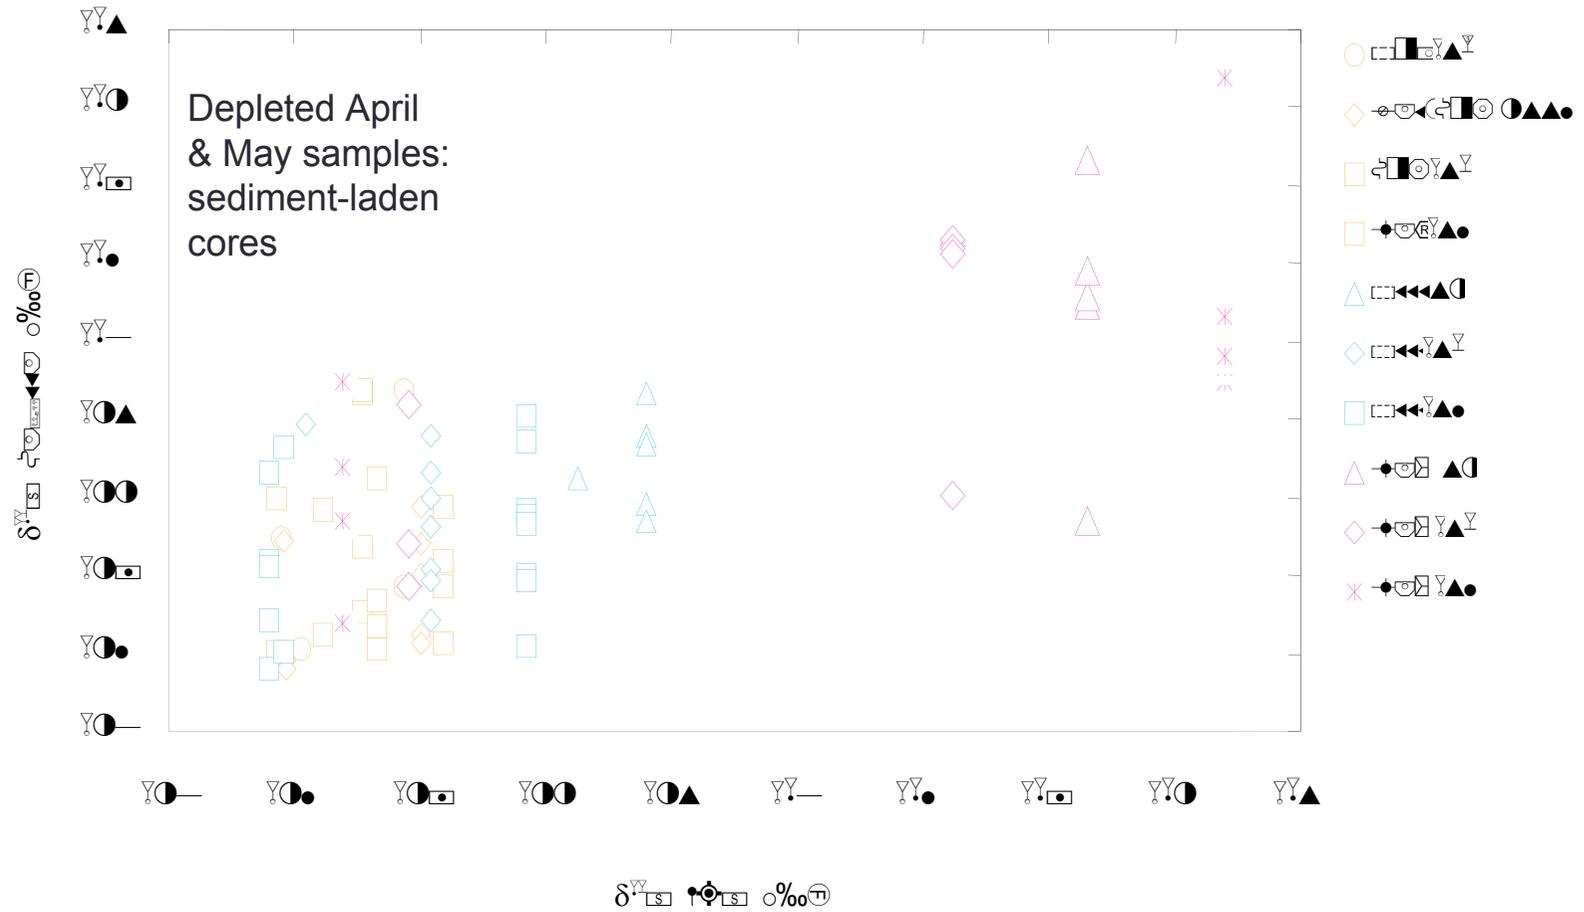

Abundance

Biomass  
(all species combined)

# Role in food web

## Discussion points, what to do next?

- Taxonomic inventories?
- Monitoring plan? (Fate of Russian drift stations?)
- State of the Arctic Marine Biodiversity report
