

Leveraging Drones to Quantify the Landscape-Context of Tundra Biodiversity Change

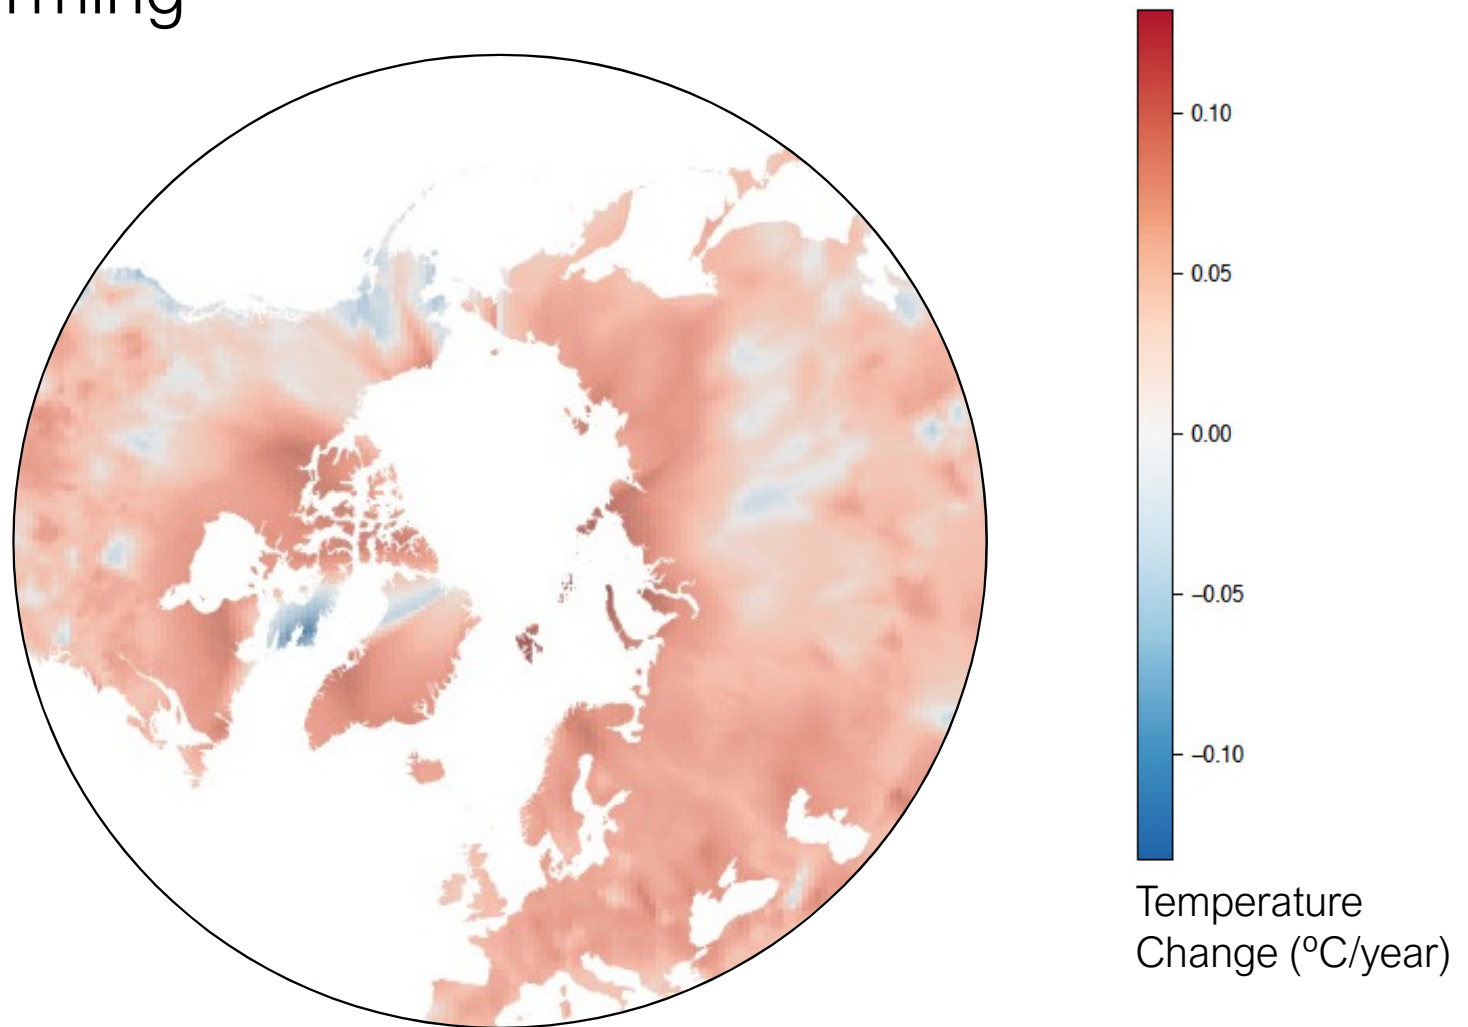

Jeffrey Kerby^{1,2}, Isla Myers-Smith² and the HiLDEN Network³

¹ Neukom Institute & Institute of Arctic Studies, Dartmouth College, ² School of Geosciences, University of Edinburgh, ³ArcticDrones.org

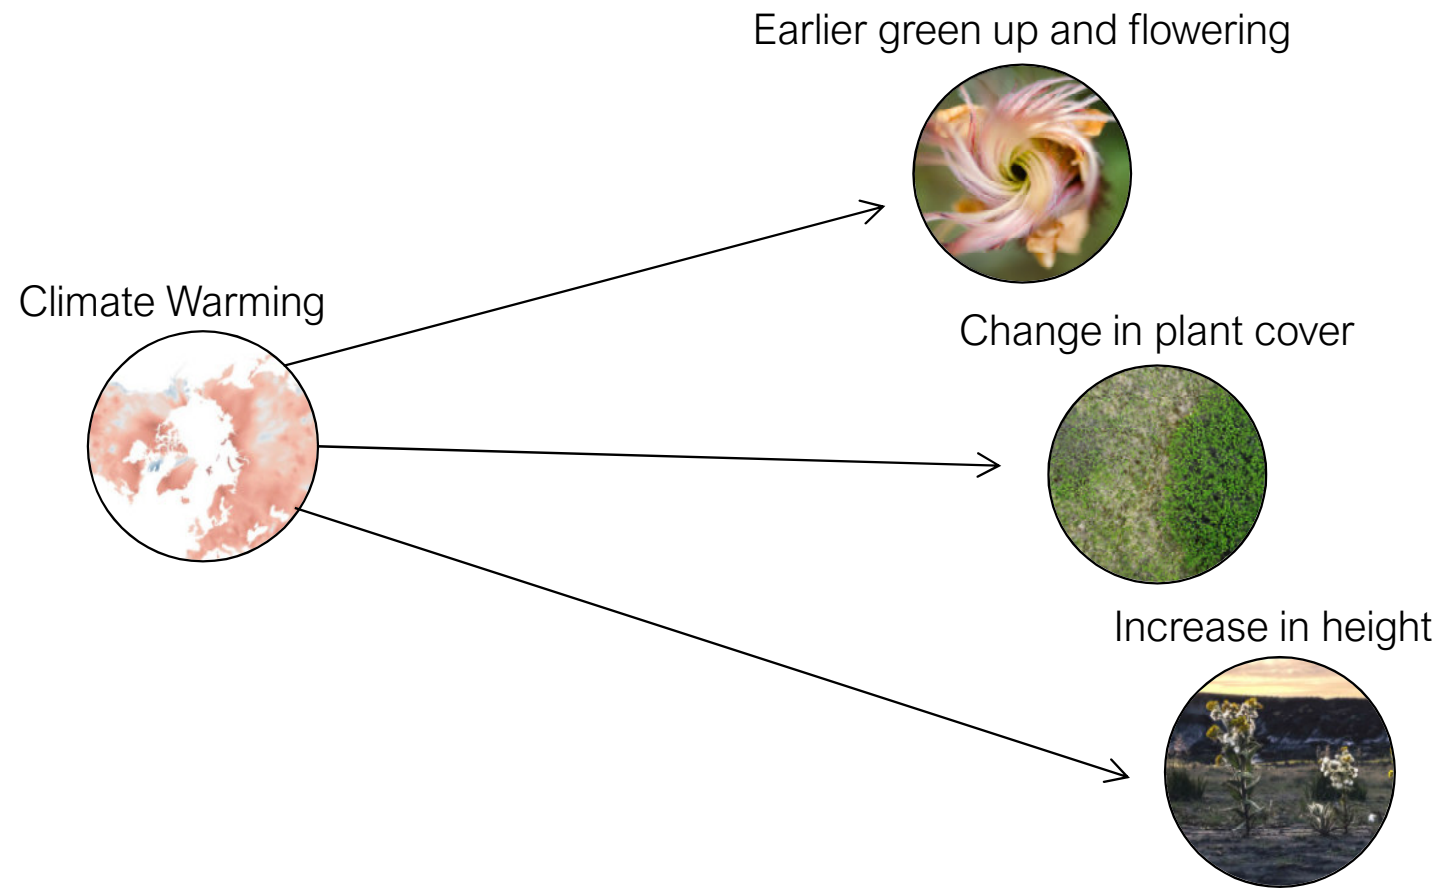

The Arctic is warming

Mean Annual Temperature Change 1978 to 2013

Observation

Modeling

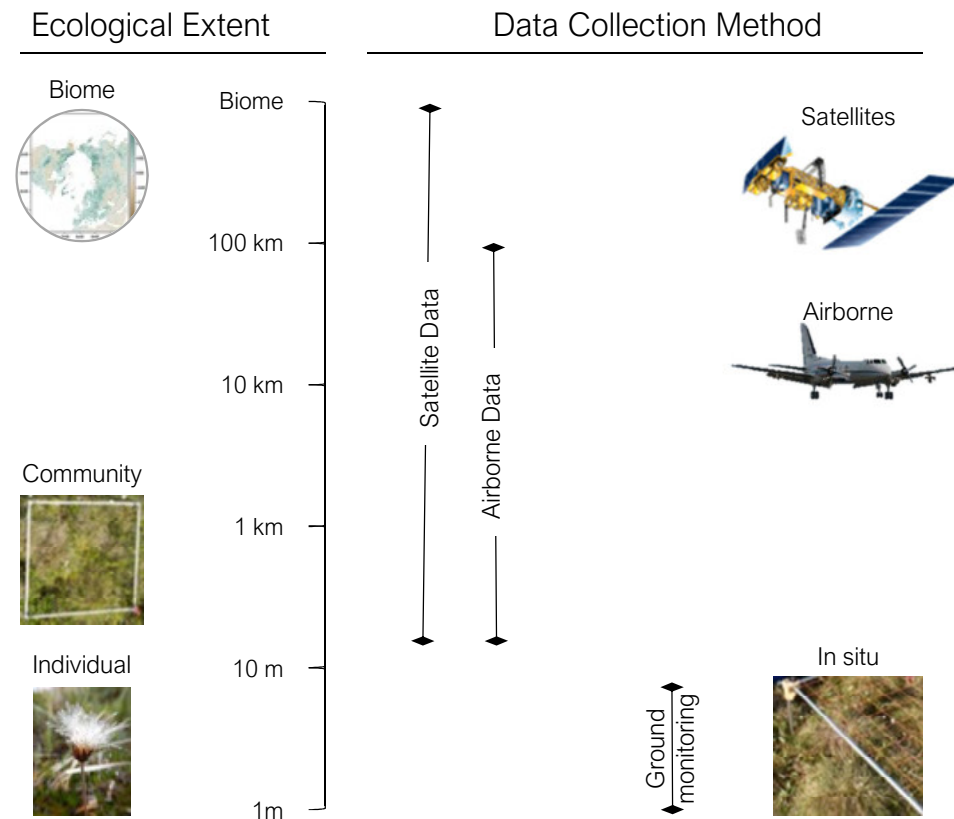

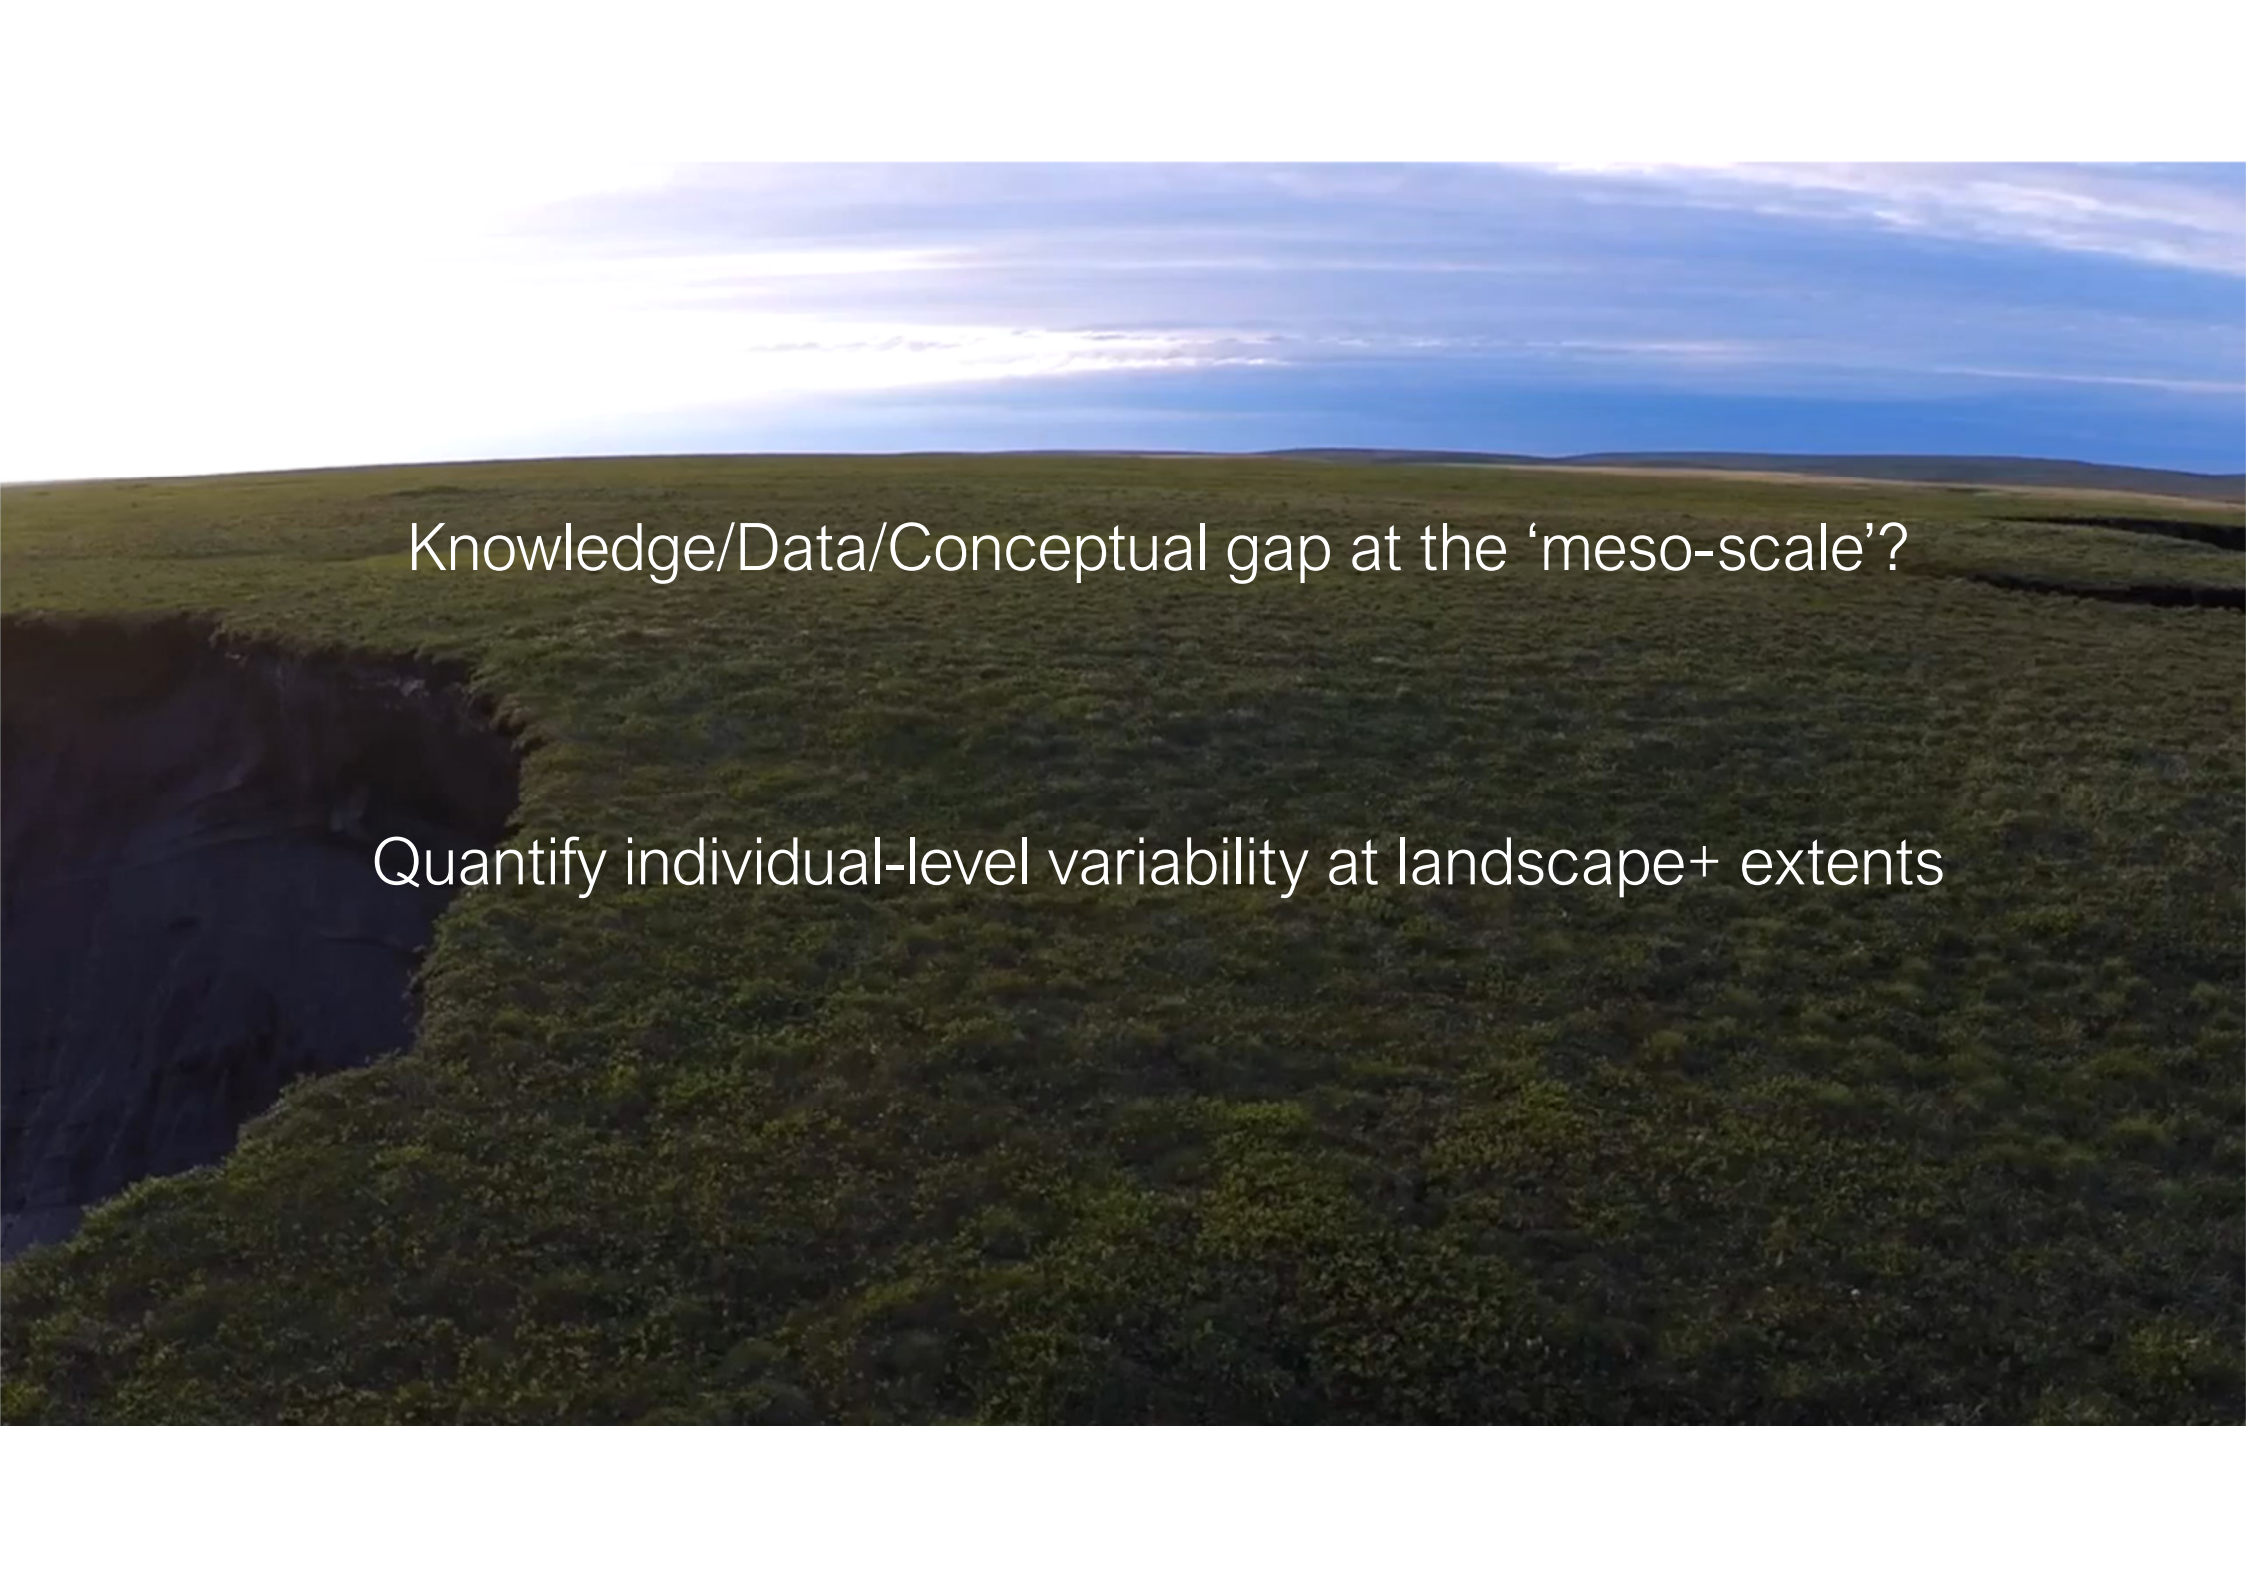

Experimentation

How to we measure ecological variability? Pattern?

How does this shape our research?

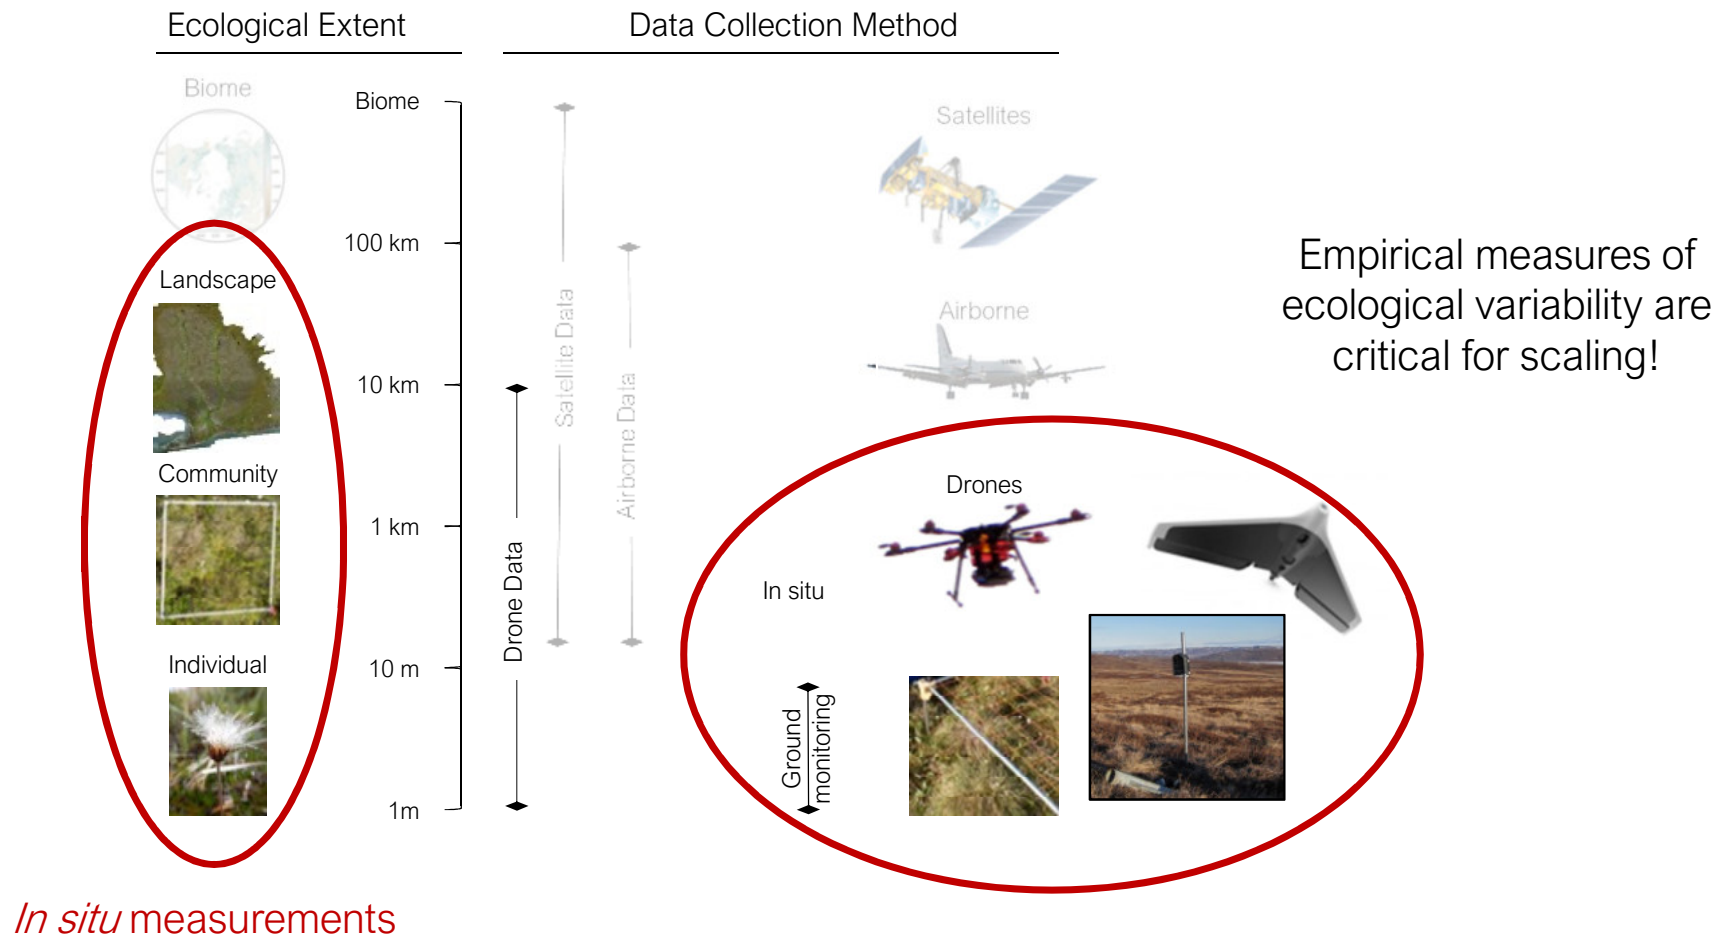

A landscape photograph showing a vast, green, grassy field. On the left side, there is a dark, eroded cliff face. The horizon is flat and distant, with a sky filled with soft, white and grey clouds. The lighting suggests a bright day, possibly near sunrise or sunset.

Knowledge/Data/Conceptual gap at the 'meso-scale'?

Quantify individual-level variability at landscape+ extents

How to we measure ecological variability? Pattern?

How does this shape our research?

HiLDEN fieldwork with Greg Henry and Alexandra Fiord Team

Drones in Tundra Ecology

- Basic drone products:
- Orthophotos (RGB and multispectral)
- Digital Surface Models

Orthophoto (RGB)

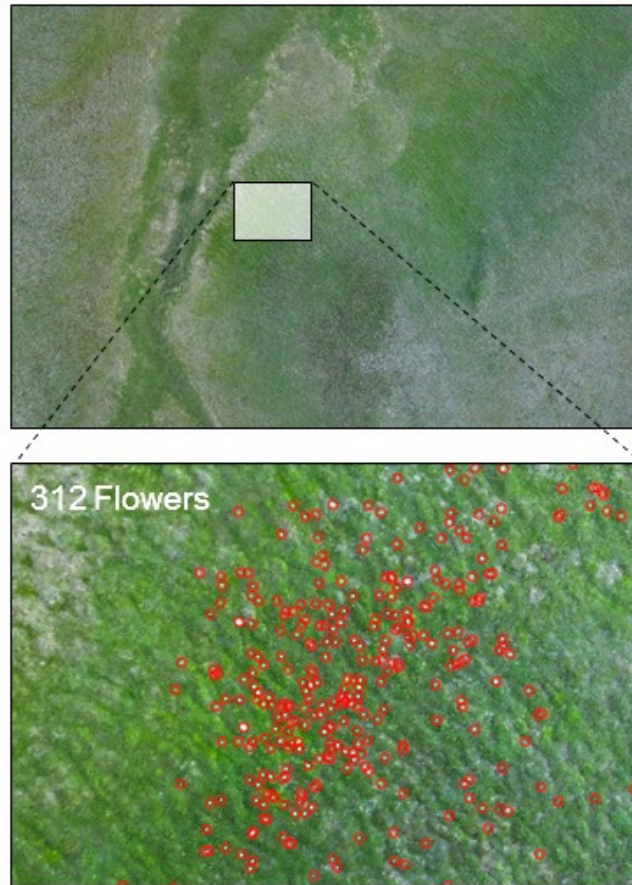

Orthophoto (multispec)

Surface Model

Through space

Through time

1-2 days of drone mapping

0 0.0125 0.025 0.05 0.075 0.1 Kilometers

0 0.0125 0.025 0.05 0.075 0.1 Kilometers

0 0.0125 0.025 0.05 0.075 0.1 Kilometers

High Latitude Drone Ecology Network

ArcticDrones.org

- Established winter 2017
- Preliminary field season May – September 2017
- Follow-up field season May – September 2018
- 40+ researchers across dozens of sites
- Data from Canada, USA, Greenland, Sweden, Finland, Svalbard, Russia
- Several TB of photos submitted/housed on secure web-server

High Latitude Drone Ecology Network

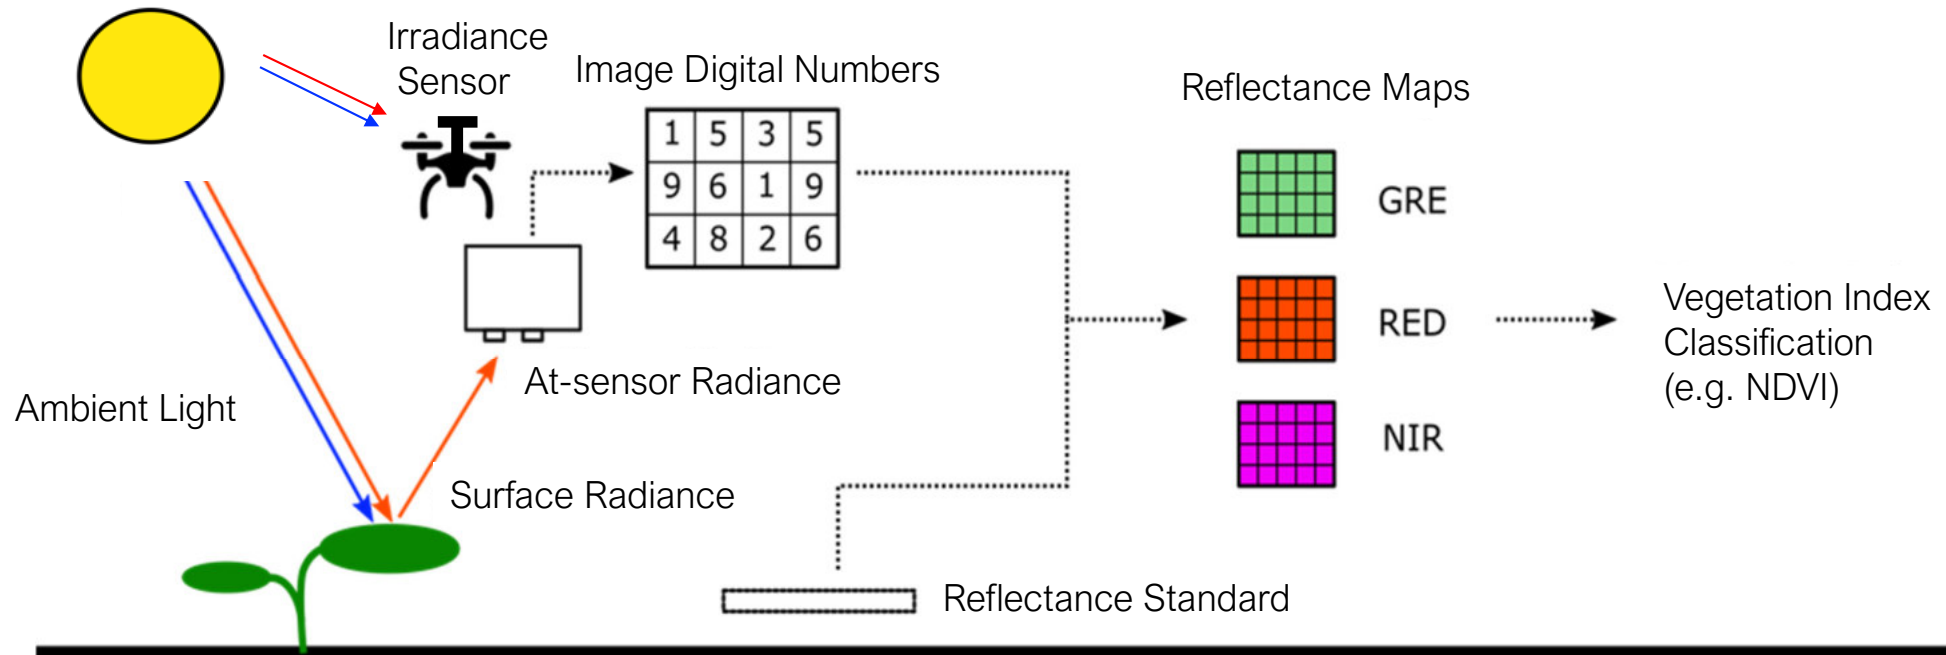

ArcticDrones.org

- HiLDEN initially focused on scaling patterns of vegetation productivity.
- Developed base-level standards for consistent data comparisons across sites and through time.
- Protocols could help existing networks add value to legacy and future datasets.

The Arctic is greening

- Increasing NDVI
- Decreasing NDVI

Increasing greenness ~ plant cover change?

Myers-Smith *et al.* in prep.

Increasing greenness ~ shrub growth?

Myers-Smith *et al.* in prep.

Conceptual Challenge: connecting plots to satellites?

- 
- × Stable cover
 - Increasing cover
 - Decreasing cover

Myers-Smith *et al.* in prep.

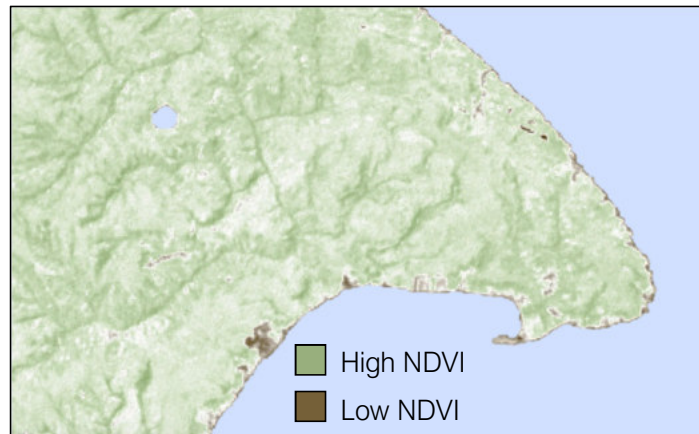

Scale, variability, and the nature of patterns.

A. MODISv6 data for peak season 2016

B. Landsat8 data for peak season 2016

C. Sentinel2 data for peak season 2016

Pattern is related to the scale at which it is measured.

Spatial and temporal variability in any measure of...

- Diversity
- Cover
- Phenology
- Productivity

All will display scale-dependent patterns.

Myers-Smith, Kerby *et al.* in prep.

Drone vs. Satellite NDVI comparisons

Do drone measured vegetation indices match satellite derived vegetation indices around the Arctic?

Drone vs. Satellite NDVI comparisons (2017 HiLDEN data)

Low Arctic

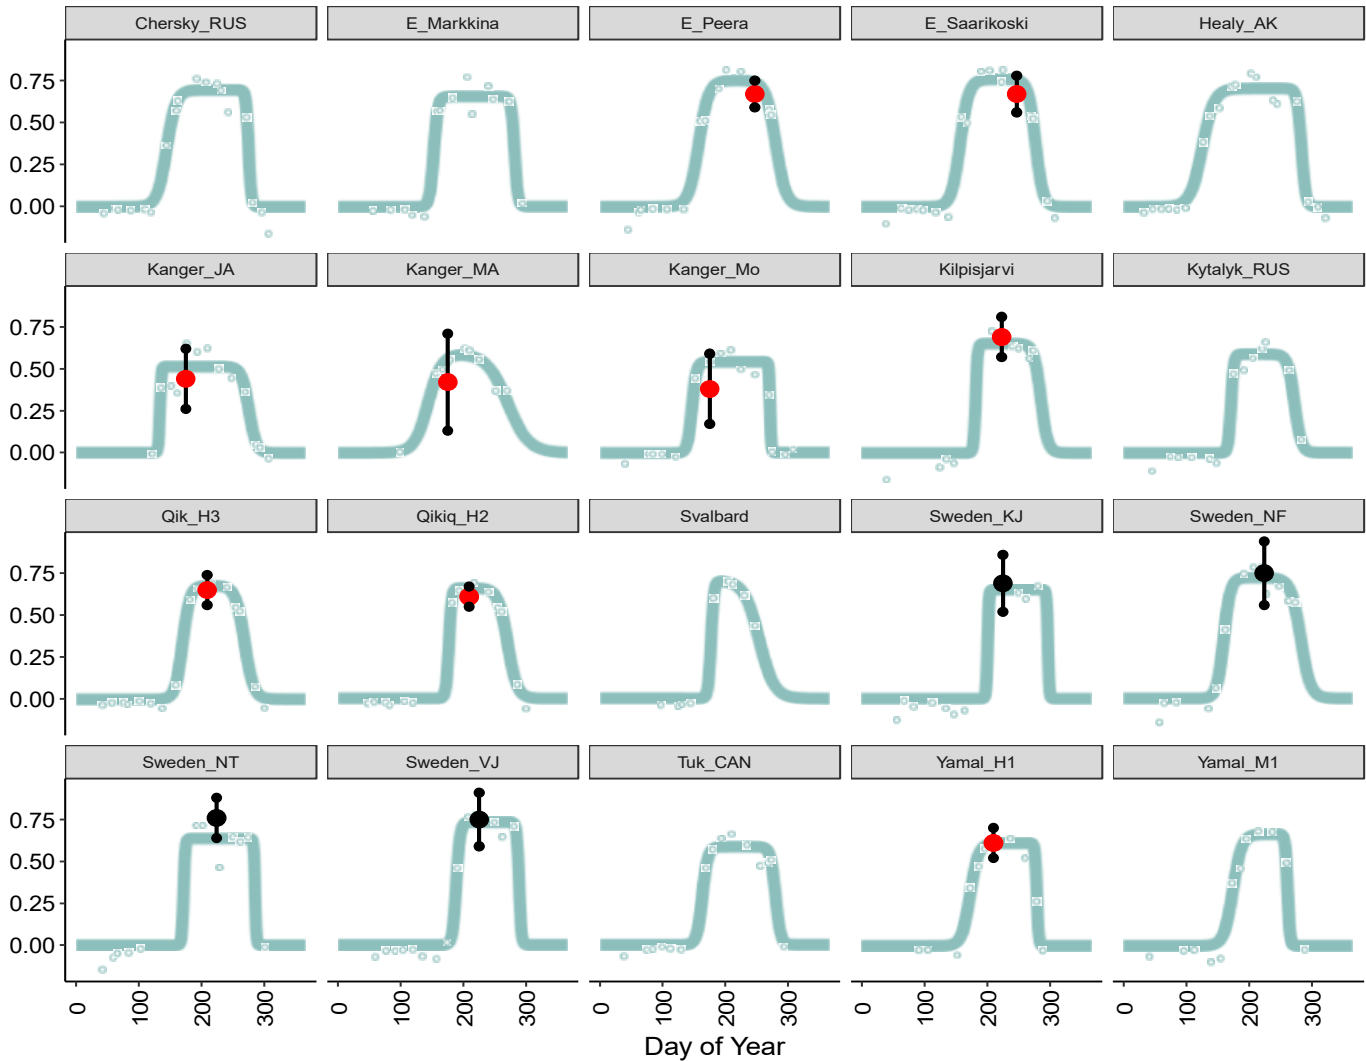

● = calibrated multispectral drone

● = non-calibrated multispectral drone

— = MODIS NDVI

MODIS6

Drone vs. Satellite NDVI comparisons (2018 HiLDEN data)

High Arctic

● = calibrated
multispectral drone

— = MODIS NDVI

MODIS6

Drone vs. Satellite NDVI comparisons

- = calibrated multispectral drone
- = uncalibrated multispectral drone

Drone vs. Modis Model

MODIS Curve NDVI

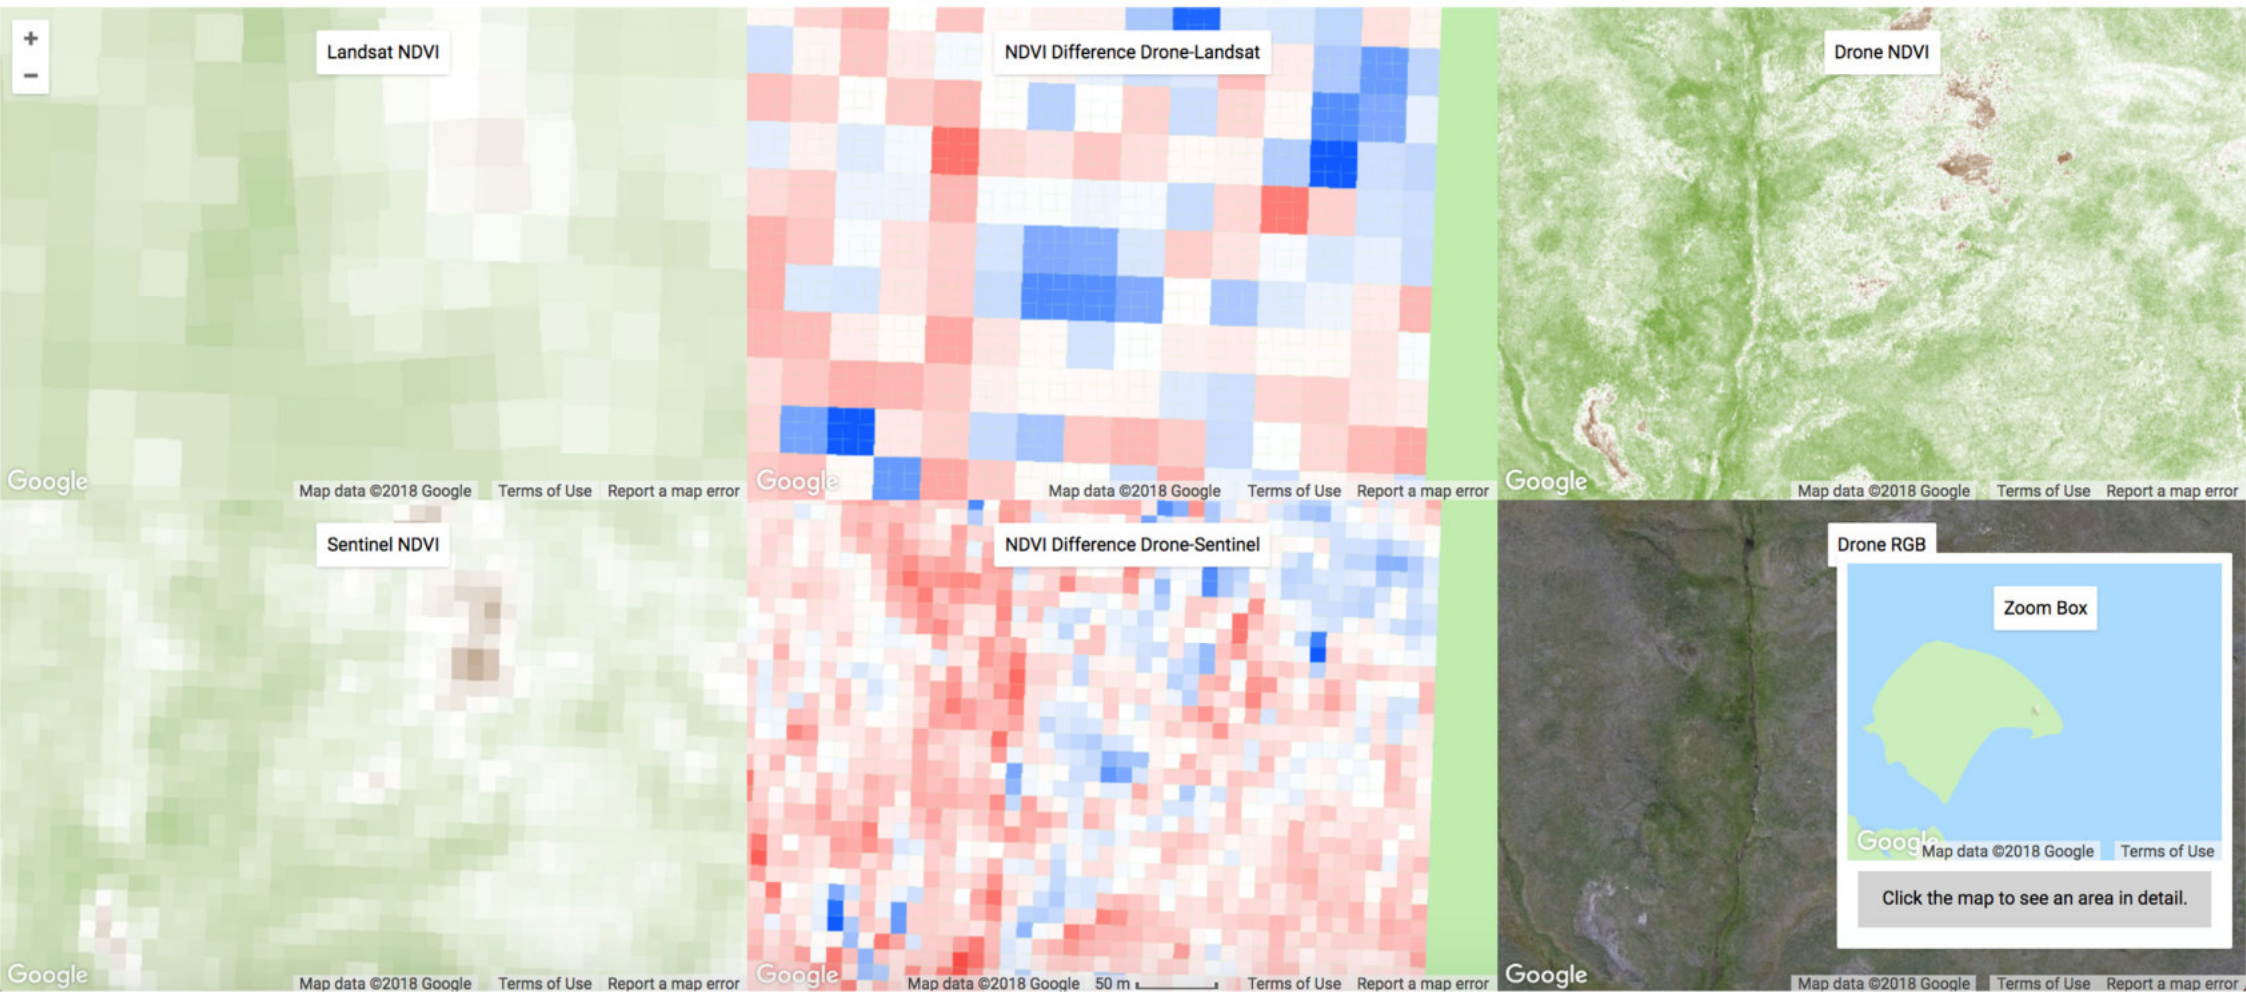

Sub-landscape influences on satellite greening trends?
